MSP GEOTRANS WINDOWS INSTALLATION INSTRUCTIONS

The distribution of GEOTRANS for Windows is normally packaged as a ZIP archive named either *win_user.zip* or *win_dev.zip*. To install the zip contents, open an MS-DOS command window and execute the following commands:

1. Create a directory to contain the distribution:

   C:\> **mkdir \geotrans**

2. Change your working directory to the directory you just created:

   C:\> **cd \geotrans**

3. Copy the zip file from your download (staging) location, to the GEOTRANS directory. For example:

   C:\geotrans> **copy D:\win_user.zip C:\geotrans**

4. Use PKUNZIP, Win-Zip, 7-Zip or similar utility to unpack the archive. For example, if the archive is on drive A:

   C:\geotrans> **pkunzip a:geotrans.zip**

   Of course, you may also use the Windows desktop to perform these steps, creating a GEOTRANS home directory, copying the ZIP file into that directory, and then unzipping it.

MSP HELP DESK SUPPORT

For help with the installation, to report an issue, or for general support help of any kind, please send an unclassified email to: MSP_Help@nga.mil

GEOTRANS Enhancement Requests can also be reported to MSP Help or to the NGA Coordinate Systems Analysis Team (CSAT) at [314-676-9124, DSN 846-9124] – STL, [571-557-4002, DSN 547-4002] – DC, or email coordys@nga.mil.
